INTRODUCTION

A polar wave is a sinusoidal function in polar coordinates. Hence a polar wave may be a radial wave function.

POLAR WAVE

All figures below use the following translation from Cartesian to Polar coordinates:

$$x = r \cos(\theta) \quad (1)$$

$$y = r \sin(\theta) \quad (2)$$

where,

$$0 \leq \theta \leq 2\pi \quad (3)$$

For a circle, $r = \text{constant}$, however for a polar wave,

$$r = A \sin(f\theta + 2\pi\lambda) \quad (4)$$

We obtain figure by using the following equation,

$$r = \sin(2\theta) \quad (5)$$

FIG. 2. Top left we have exponential function seen in equation.

FIG. 3. Top left we have exponential function seen in equation.

which constructs a Polar wave with 4

$$r1 = \sin(10\theta) \quad (6)$$

$$r2 = 3\sin(\theta + 20) \quad (7)$$

$$r3 = \sin(\theta + 100) \quad (8)$$

$$r3 = \sin(\theta + 147) \quad (9)$$

FIG. 4. Top left we have exponential function seen in equation.

FIG. 5. Top left we have exponential function seen in equation.

SPIRAL POLAR WAVE

POLAR WAVE INTERFERENCE

The summation of polar waves creates a single polar wave interference pattern similar to Cartesian wave interference.

$$r = \sin(10\theta) + 3\sin(\theta + 20) + 3\sin(\theta + 20) + \sin(\theta + 100) + 3\sin(\theta + 147)$$
